

concentration range around 1 at% Pd where no ordering has been observed. The spin-fluctuation temperature increases with the application of pressure, whereas the superconducting and anti-ferromagnetic ordering temperatures are depressed, leaving open the possibility that the same interactions are responsible for superconductivity and anti-ferromagnetism.

CMD ELECTIONS

Call for Nominations for the Sections of the Condensed Matter Division

Elections to the Committees responsible for the Sections of the Condensed Matter Division will be held by mail as soon as the preparations are complete.

Below is a provisional list of candidates prepared by the Chairman of the Division in consultation with the present Committee Chairmen. Individual Ordinary Members who are Section members and National Societies, Category 4b), are invited to make additional nominations. Those made by IOMs should be supported by at least six members.

Each Committee consist of six full members, elected for a term of three years, plus up to six co-opted members. The Sections then elect their own Chairmen and these serve on the Board of the Division. The maximum continuous period over which a Committee member may serve is six years.

In the lists that follow, the names of the Committee members elected at the last elections in 1983/84 are marked with an asterisk.
