Divisional comments, 75
Experimental programme, 75-79
Higgs connection, 92-95
Machine design, 80-91
Quarks, lattices and transputers, 24-28
Second lepton family, 10-12
SSC go-ahead, 110

Japan, Phys. Soc., EPS privileges, 126

Nobel Prize 1989

The 1989 Nobel Prize in Physics has been awarded to three physicists for work starting in the 1950's that led to recent advances in the field of atomic precision spectroscopy. The award winners are Norman Ramsey (Harvard, USA) for the application of separated oscillatory electromagnetic fields, Wolfgang Paul (University of Bonn, FRG) and Hans Dehmelt (University of Washington, USA) for the introduction and development of the ion trap technique. An appreciation will be published in the next issue of *Europhysics News*.
