

JOURNAL EXCHANGES: Physics journals in East and Central Europe – details and contacts for journal exchanges.

The exchange of physics journals is extremely important for east and central European countries as it provides a means to acquire foreign publications. The journals listed below have undertaken to ensure that copies of journals received from outside their respective countries will be made available to the physics community at large (generally by keeping the journals in a centrally located and easily accessible library). Publishers of physics journals are being encouraged to initiate or extend exchange arrangements by contacting the offices listed in the table.

in borderline areas where it is useful to address a broad audience.

I conclude by greeting my successor, Franco Gianturco, an atomic and molecular physicist from Rome who took over at the beginning of April. Although we come from quite different fields of physics, we have similar ambitions for *Europhysics Letters*. The various nationalities and scientific specialities of the first four Editors-in-Chief should be a symbol of the openness of our journal. I therefore wish Professor Gianturco every success.

Europhysics Letters and the *European Journal of Physics* in 1994.
